Appendix A. Revision history

1. Purpose

Return orders-api to the previous revision when a new deploy breaks it.

2. Scope

Applies to orders-api deploys in the shop-prod cluster.

3. When to use

Use this procedure when the OrdersApiCrashLooping alert fires right after a deploy.

Alerts: OrdersApiCrashLooping

4. Definitions and abbreviations

None.

5. Roles and responsibilities

Role	Responsibility
On-call engineer	Runs the procedure.

6. Related documents

None.

7. Prerequisites

- kubectl access to the shop namespace.

8. Procedure overview

Roll back to the previous revision, then check health.

9. Procedure

Run the steps in order. Do not skip or reorder steps. Stop and escalate if a result does not match the expected result.

Step	Action	Command	Expected result	Responsibility	Automation
1	Roll back to the previous revision.	`kubectl -n shop rollout undo deploy/orders-api`	The rollout finishes.	On-call engineer	action:rollback_config
2	Confirm the API is healthy.	`curl -s http://orders-api:8080/health`	Status ok.	On-call engineer	check:health

10. Verification

- orders-api pods run with no restarts for 10 minutes.

11. Rollback

Step	Action	Command	Expected result	Responsibility	Automation
1	Re-apply the new revision.	`kubectl -n shop rollout undo deploy/orders-api`	The new revision is running again.	On-call engineer	

12. Troubleshooting

None.

13. Escalation

- Page the orders team if the rollback does not finish.

14. Security considerations

None.

15. Compliance and standards

None.

16. Review and update

Reviewed every year.

17. Records

Note the rollback in the deploy channel.

Appendix A. Revision history

Revision	Date	Author	Change
01	2025-02-10	Luis Romero	First version.
